A WORD TO OUR FRIENDS AND PATRONS

We take pleasure in presenting to our patrons our price list for the season of 1926, thanking them for past favors and soliciting a continuance of same. We aim to have every deal a satisfactory one. Our stock is first class and will be packed in the best manner.

How to Reach Our Yard in Oakland—Take any Oakland, Berkeley or Alameda car, transfer to Piedmont avenue car, get off at Forty-first street, near Piedmont Key Route station. Patrons from San Francisco take Key Route ferry boat to Oakland; then the Key Route train for Piedmont Station.

Planting—We use every precaution to deliver healthy, vigorous stock, but the measure of your success will depend upon the planting and care given, as careless or ignorant handling kills thousands of fine trees and plants every season. Avoid unnecessary exposure of roots to the air. In the case of evergreens that are "balled," **do not remove the burlap**. Plant as received; only cut the string around the top, then **loosen the burlap after the tree is set**. If you cannot plant immediately on receipt, always **"heel"** in the trees so their roots may be in contact with good soil. An hour's exposure of roots to wind or sun may kill any tree; this is especially true of evergreens. In planting cut off the bruised or broken roots with a sharp knife.

If the soil is good and properly prepared, only a hole large enough to easily take the roots need be dug, but better results can always be obtained by digging out a large space and filling in with good top soil. In setting the trees, do not put deeper than they stood in the nursery, excepting some dwarfs, which go a little deeper. But now comes the important detail, the neglect of which is responsible for many failures—

Be sure to pack the earth solidly around the roots. Leaving the ground loose after planting has caused tremendous losses that are generally and unjustly blamed to the nurseryman. Another cause of great loss is the wind working the newly set trees loose from the soil. This kills them. Always stake newly set trees if in a windy situation. After trees are set, make a plan of the grounds, marking the different varieties; then remove the wire labels, as they may damage the growing limbs.

Warranty—While we exercise the greatest care to have all our trees and plants genuine and reliable, and hold ourselves prepared to replace, on proper proof, all that may prove untrue to name, we do not give warranty, expressed or implied, and in case of error on our part it is mutually agreed between the purchaser and ourselves that we shall not, at any time, be held responsible for a greater amount than the original price of the trees.
